Commencement of Repairing Business for Ultra-Precision Single Crystal Diamond

Tools at A.L.M.T. Diamond Dies (SUZHOU) Co., Ltd.

At present, the demand for ultra-precise single crystal tools is rapidly increasing in China. (These tools are used for the processing of ultra-precise molds for smartphone lenses and in-vehicle cameras, and eyeglass lenses)

Although these tools need to be repaired multiple times, the service was until now only provided in Japan and Thailand. Much time was required for transportation etc. in order to have repairs done in China.

By starting this tool repairing business in China, we are now prepared to efficiently meet customer demands for a speedy delivery.

As a result, we now have established local systems for polishing ultra-precision single crystal diamond tools in Japan, Thailand and China.

A.L.M.T. Corp. will continue to provide services which satisfy our customers, and we would appreciate your continued support in the future.
